1 Introduction

This report documents the development of a fully responsive web page built using HTML, CSS and Javascript. The objective of this project was to understand layout structuring, responsive design principles, and UI component implementation step by step.

Technologies used:

- HTML5
- CSS3 (Flexbox Grid)
- Javascript for the interactions
- Responsive Design (Media Queries)
- Deployment via Vercel

2 Top Bar

2.1 Description

The top bar contains contact information and quick-access links. It is positioned at the top of the page and designed using Flexbox for horizontal alignment.

2.2 Screenshot

Figure 1: Top Bar Section

3 Navigation Bar

3.1 Description

The navigation bar provides access to different sections of the website and a light/dark mode button switcher. It is fully responsive and transforms into a mobile-friendly layout.

11 Conclusion

This project demonstrates the implementation of a complete responsive landing page using modern HTML CSS and JS practices. It showcases layout structuring, component-based thinking, and deployment workflow using Git and Vercel.

Future improvements may include:

- Adding more JavaScript animations and features
- Have hands on Tailwind CSS

- Improving accessibility
- SEO optimization
- Performance enhancements
